

Dear Representative \_\_\_\_\_ ,

I urge you to oppose any loan guarantees or other subsidies for nuclear power.

The current loan guarantee program does not have a mechanism to protect the taxpayer, nor does it account for the actual risk to the taxpayer. The Congressional Budget Office found that the likelihood of default on loans for new nuclear reactors is “well above 50 percent.” Any industry that relies on handouts after 51 years is not one that taxpayers should support.

Nuclear power is the most costly and water-intensive energy source and is not the solution to climate change. It is impossible to build enough reactors to make a dent in our carbon emissions in the amount of time scientists say we need to change course.

Nuclear power is not clean or safe, as nuclear reactors routinely emit cancer-causing radionuclides and generate radioactive waste that threatens our health today and remains dangerous for thousands to millions of years.

Please support and prioritize energy efficiency and renewable solar and wind power energy solutions. Nuclear or so-called “clean coal” must not be classified or funded as renewable or clean energy choices.

Sincerely, \_\_\_\_\_
