

Dear Representative _____ ,

Please halt HB 2721 immediately!

In this time of drought, water resources are becoming more precious. Governor Perry has just requested federal assistance for ranchers in all 254 counties of Texas because of drought impacts. Additional nuclear reactors would worsen the situation since they consume massive quantities of water for cooling. One single proposed reactor would use 30,000 gallons of water every minute, and over 100,000 acre-feet of water every year.

Yet HB 2721 proposes to fast-track water permits for nuclear reactors, disallowing contested case hearings for these permits. This bill threatens our water supply and shamefully assaults the rights of Texans. Both the Comanche Peak and South Texas Project nuclear sites have some 19 permits that will be coming to the TCEQ in regard to proposed nuclear reactors. Decisions regarding our water supply must be made carefully. Demand that contested case hearings remain intact by halting HB 2721.

Support HB 3423 to keep Texas from being a national dumping ground!

HB 3423 would protect Texas from becoming the nation's radioactive dumping ground by closing the loophole in the Compact Waste Agreement that allows any state to dump on Texas. Please reply regarding whether you will take these requested actions.

Sincerely, _____
